INLIGHT THERAPY

A REVOLUTION IN LIGHT THERAPY

When [InLight Therapy](#) was founded in 1985, the company was already light years ahead in the technological advancement and development with its alternative, non-invasive, non-abrasive modality that supports the body's natural healing process by increasing circulation to reduce inflammation and pain.

The original basis for the creation of InLight Therapy was derived from the acupuncture concept of pressure points. The InLight technologists researched and experimented with the process of applying non-invasive LED lights to certain pressure points of the body. When applied, it was discovered that the lights would activate and aid in stimulating the body's natural self-healing abilities. The outstanding results proved to increase circulation, decrease pain and overall well being.

Today, InLight is leading the industry with their wide range of therapy devices that are FDA cleared to increase circulation and decrease pain. The company's systems are safe, drug-free and non-invasive with no known side effects. The main focus of the research team is to ensure that the systems provided are always leading edge and the highest quality LED systems in the market place.

InLight Therapy's mission is to deliver the most innovative and technologically advanced polychromatic LED systems for an alternative, non-invasive remedy to decrease pain and enhance wellness to people around the world.

TRICOLOR LIGHT PADS

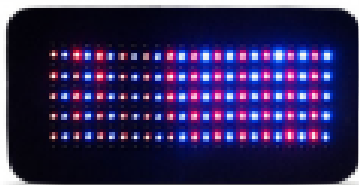

POLYCHROMATIC THERAPY PADS

Polychromatic Light Therapy is a unique therapy that harnesses the powers of infrared light. Unlike blue, red or yellow light, near infrared (also known as IR) light is invisible to the human eye. It emits special wavelengths of light energy that dramatically increase circulation to injury sites and areas of chronic pain. The IR light has been reported to dilate blood vessels at the site of treatment. The result tends to be a more rapid relief of discomfort, improvement in sensation, and regeneration of damaged

tissues. Additionally, unique value in each “color” of polychromatic applications has been found and utilized.

As FDA-cleared Class II home-use medical devices, it is confirmed that the simple application of InLight’s flexible neoprene pads laden with polychromatic LED combinations of red, blue, and infrared diodes directly onto the skin introduce the benefits directly to the body parts through skin response. InLight Medical polychromatic PLT therapy pads come in a variety of sizes and shapes to fit different areas of the body comfortably. A 20-minute session can deliver enough polychromatic light to trigger the body’s innate healing response by increasing circulation and reducing inflammation and pain.

THESE TRI-COLOR POLYCHROMATIC THERAPY PADS COMBINE RED, BLUE, AND NEAR-IRREDARED LIGHT INTO A SINGLE PAD.

BODY 264 PAD TRICOLOR

SKU: N/A

The InLight Body 264 Tricolor PLT Pad is the largest pad in the InLight collection delivering a polychromatic dose with 264 blue, red and near-infrared (NIR) diodes. The polychromatic delivery of photonic energy with In Light’s unique **Progressive Multi-Pulse™** technology provides the body with low level light therapy.

Price: \$500.00
