

RED & INFRARED LIGHT PADS

RED LIGHT PAD BENEFITS

Polychromatic Light Therapy (PLT) is a unique therapy that harnesses the healing powers of red and infrared light. Red light penetrates the skin and is absorbed by the cells to trigger photobiomodulation mechanisms including the release of nitric oxide, the body's natural vasodilator.

Unlike blue, red or yellow light, near infrared (also known as IR) light is invisible to the human eye. It emits special wavelengths of light energy (800 - 1100 nm) that dramatically increase circulation to injury sites and areas of chronic pain. The IR light has been reported to dilate blood vessels at the site of treatment. The result tends to be a more rapid relief of discomfort, improvement in sensation, and regeneration of damaged tissues.

The InLight Medical polychromatic neoprene therapy pad is designed to be easily and comfortably applied to any surface area of the body. They can flex to fit top of the head, hands, wrists, arms, axilla, knees, ankles, feet and more.
